SKIN TAG AND CHERRY ANGIOMA REMOVAL PRE & POST CARE INSTRUCTIONS

Before Your Appointment

- Avoid tanning, sunburn, or chemical peels on the treatment area for **1 week** prior.
- Discontinue the use of retinoids, glycolic/salicylic acids, benzoyl peroxide, and prescription topicals on the area for **3–5 days** before treatment.
- Do not apply lotions, oils, or heavy creams to the treatment area on the day of your appointment.
- If you are prone to cold sores and the treatment is near the mouth area, consult your physician about antiviral medication prior to treatment.
- Please inform your provider of any medications, recent skin treatments (lasers, microneedling, injectables), or health changes.

After Your Appointment

- Mild redness, swelling, or scabbing at the treatment site is normal and temporary.
- Keep the area clean and dry for the first 24 hours.
- Do not pick, scratch, or rub the treated area — allow natural healing.
- Apply a gentle soothing product such as witch hazel or Neova CU3 Recovery Lotion, as recommended.
- Avoid active skincare products (retinoids, glycolic/salicylic acids, benzoyl peroxide, exfoliants) for **5–7 days**.
- Avoid sun exposure, tanning beds, saunas, hot tubs, or strenuous exercise for **48 hours**.
- Always use **broad-spectrum SPF 30+** on exposed areas while healing.
- Small scabs may form; allow them to fall off naturally. Premature picking may cause scarring or delayed healing.

Contact Renew Laser & Aesthetics if you experience persistent redness, unusual swelling, blistering, or signs of infection.
